Dear Sir/Madam,

Asistemos assists their clients by proposing innovations and high working standards gained from 20 years of work experience in the field of electrotechnical and automation equipment production. We produce low-medium voltage electric and automation according to our customer needs and technical requirements. What stands out about this organization is the speed and dynamism with which the group of 160 workers takes.

Our main activity areas are:

- Production of electrotechnical equipment
- Trade of electrical goods (retail/wholesale)
- Design and services (like: assembly/application to OEM, technical service, consulting)
- Production of automation equipment (design work, programming, visualization SCADA, manufacture)

Asistemos is located in Panevezys, Lithuania. The big advantage that city is in a perfect geographical location:

1. Halfway between two Baltic capitals: Vilnius and Riga
2. Via Baltic highway runs through the city and connects it to Scandinavian and West Europe countries.

The company is looking for talented young people who are willing to make the company’s process jobs easier offering improvement solutions, export possibilities, international collaboration, options for raising brand awareness.

What we offer?

An internship with an extensive list of functional areas to choose from including electrotechnical, automation, design, sales, finance, marketing and product management, the program is designed to help students find their niche. We offer you:

- All the relevant information about company.
- Valuable, real-life experience working side by side with professionals.
- The interns who have the pleasure of being part of our company, will have a mentor during the entire internship and as well as having the opportunity to put into practice their knowledge. Student will be able to prepare thesis in home county.
- Feedback and references for future career.
Intern will get valuable on-the-job experience and improve leadership and professional competencies through challenging work projects and development training. Intern will get experience and build transferable skills such as problem-solving, effective communication. As an apprentice with Asistemos, a qualified employee will be responsible for practical training, while mentor will give all the information for successful thesis preparation. This combination of hands-on experience and theoretical education offers opportunity for your professional development.
